01

Concept Showcase

概念展示

机械元素与昆虫变色龙形态相融合，躯体 LED 屏可依据环境实时变色，用科技赋能生物特质，从而凸显昆虫的鲜明特点。

The mechanical elements are integrated with the forms of insects and chameleons. The LED screen on the body can change color in real time according to the environment, empowering biological characteristics with technology to highlight the distinctive features of insects.

Concept Showcase

概念展示

以大型机电结构还原乌贼捕食、吸附抓取的行为特征，将生物科学、机械科学、仿生学与力学深度融合，打造兼具科学性与观赏性的演示载体。

A large electromechanical structure replicates the behavioral characteristics of squid, such as predation and adhesive grasping. It deeply integrates bioscience, mechanical science, bionics and mechanics to create a demonstration carrier with both scientific value and ornamental appeal.

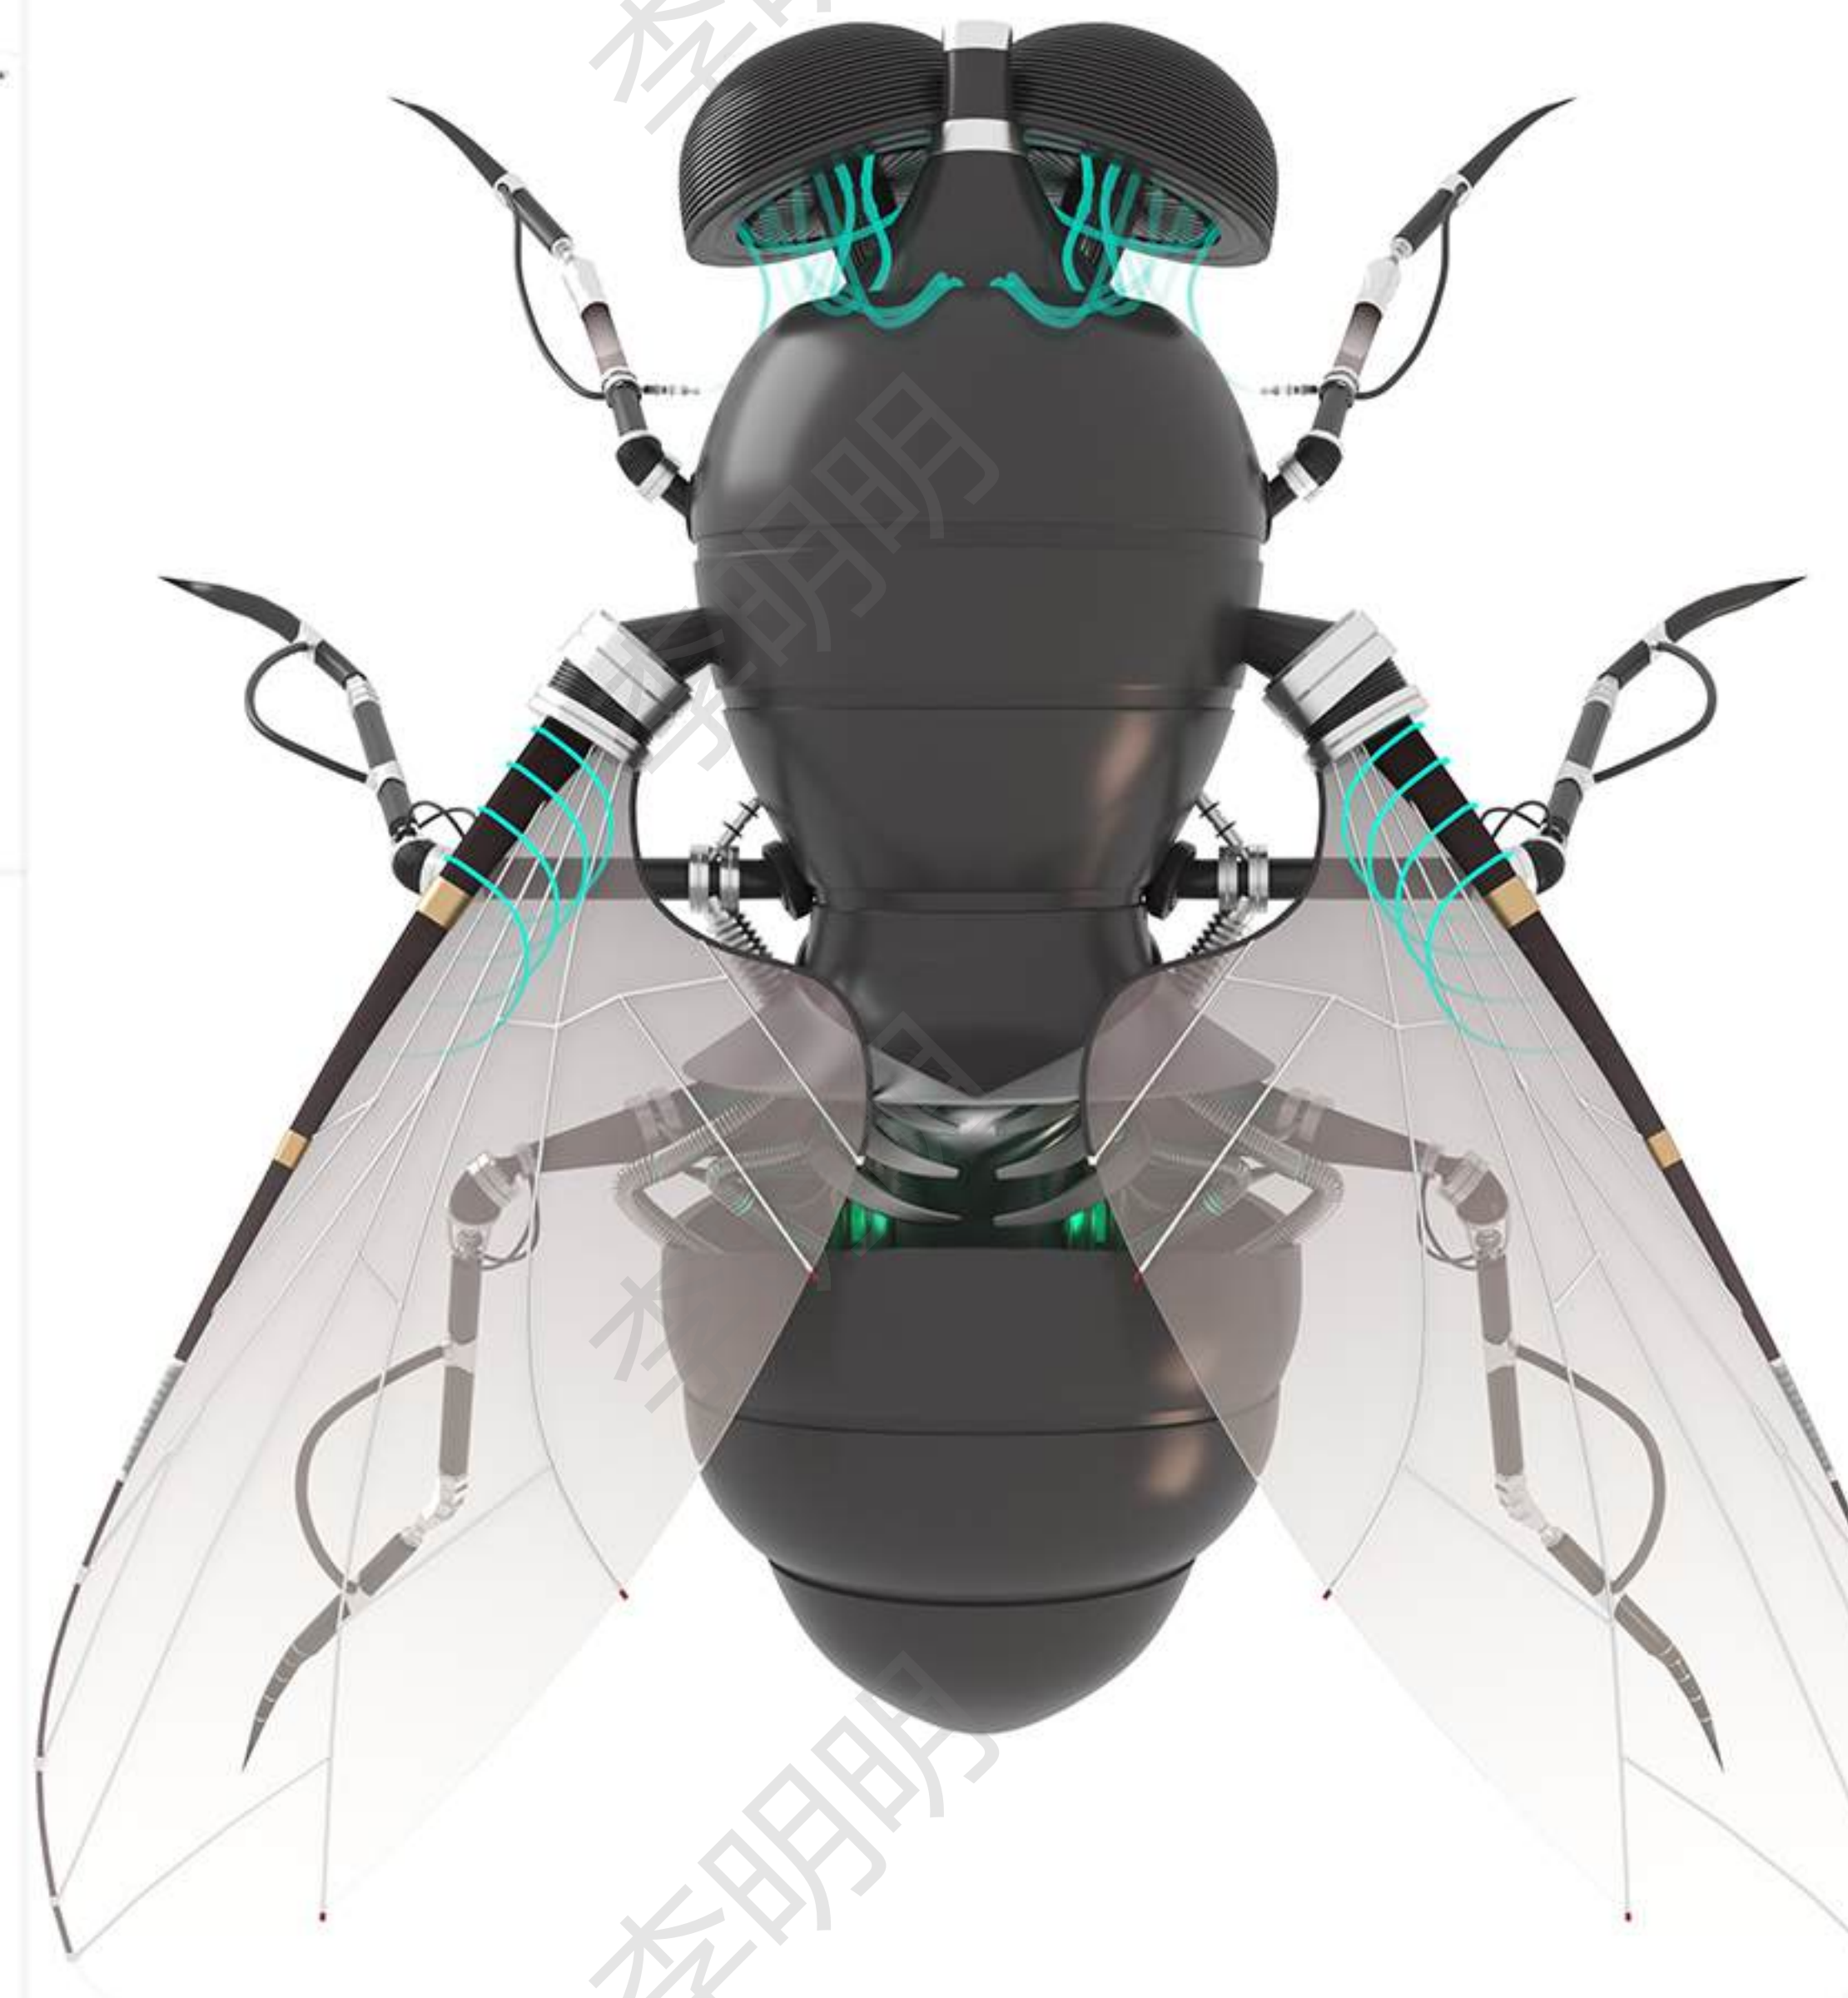

Concept Showcase

概念展示

透明亚克力薄片及黑色PC材料搭配透明玻管形象的还原了机械苍蝇的躯体特征。

The combination of transparent acrylic sheets, black PC materials and transparent glass tubes vividly replicates the physical characteristics of the mechanical fly.

Concept Showcase

概念展示

模拟热带气候环境特征，通过远程控制技术搭配触控屏幕，即可操控机械长颈鹿完成对应动作。

It simulates the environmental characteristics of tropical climates. With remote control technology combined with a touch screen, the mechanical giraffe can be manipulated to perform corresponding movements.

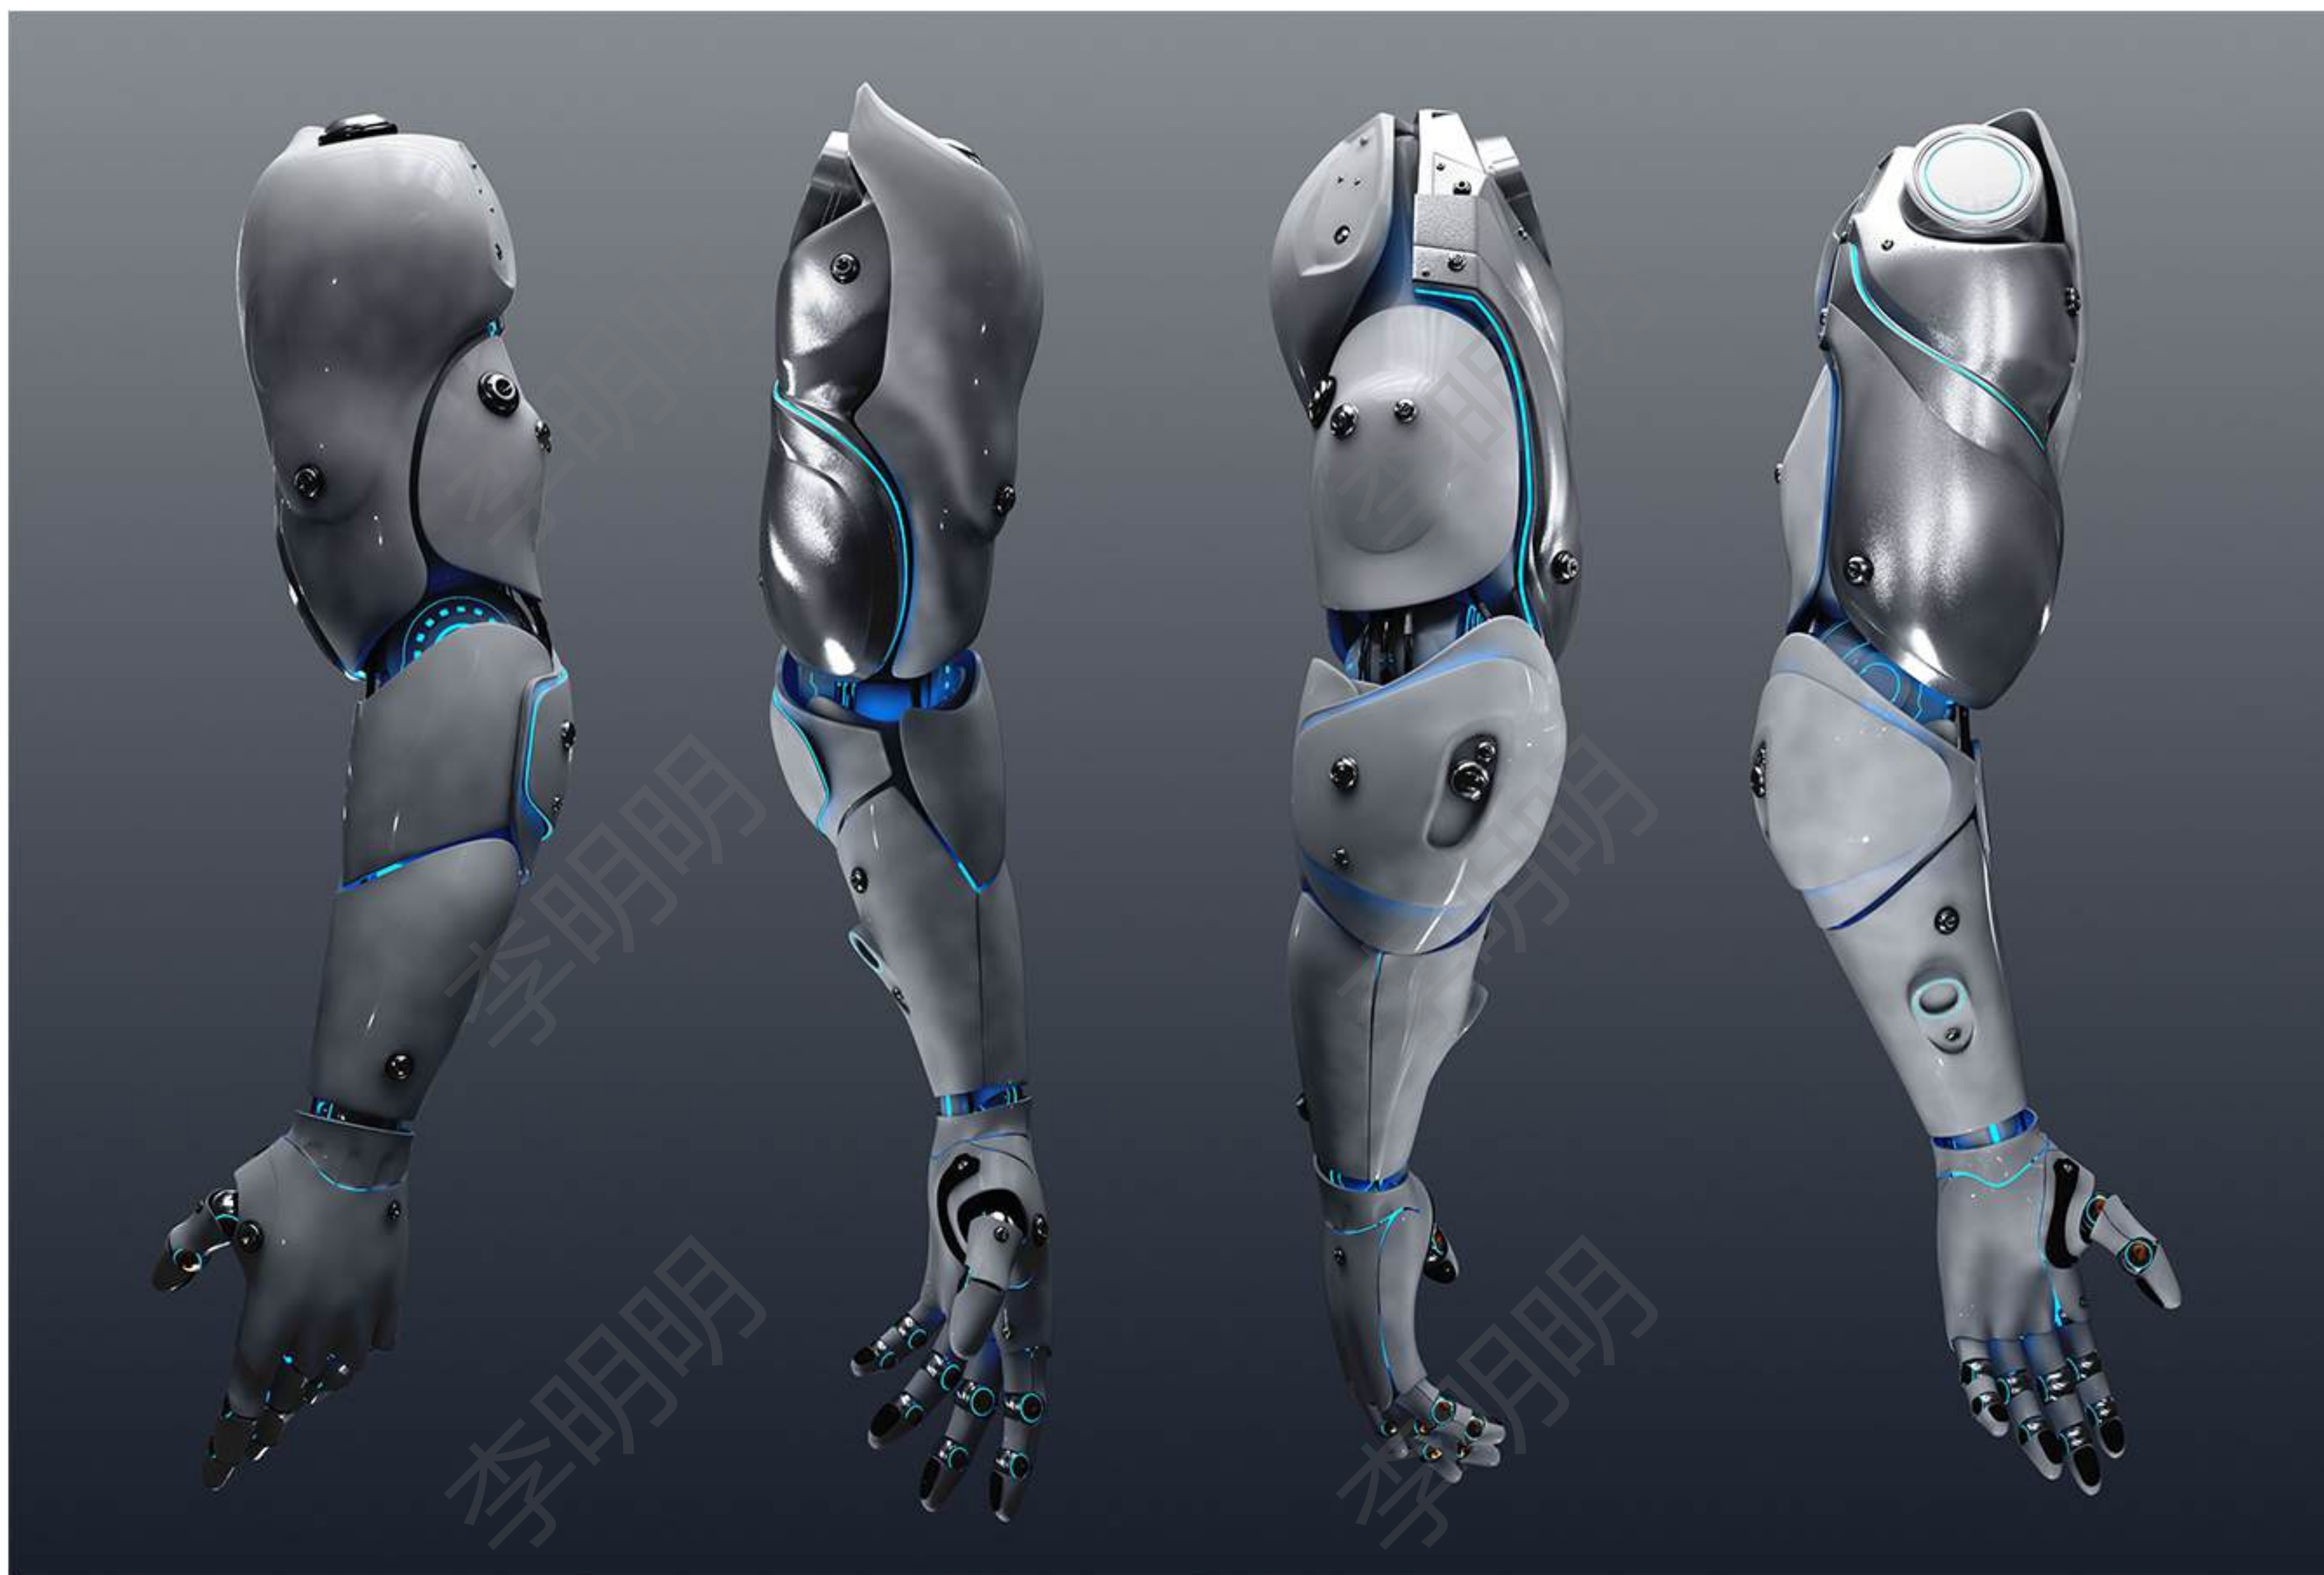

02

Concept Showcase

概念展示

机甲形态元素与伺服驱动技术相融合，突破传统夹爪局限，兼具高精度操作性能，适配工业与仿生交互双场景。

The integration of mecha-style structural elements with servo drive technology breaks through the limitations of traditional grippers, delivering high-precision operational performance and supporting dual scenarios of industrial operations and bionic interaction.

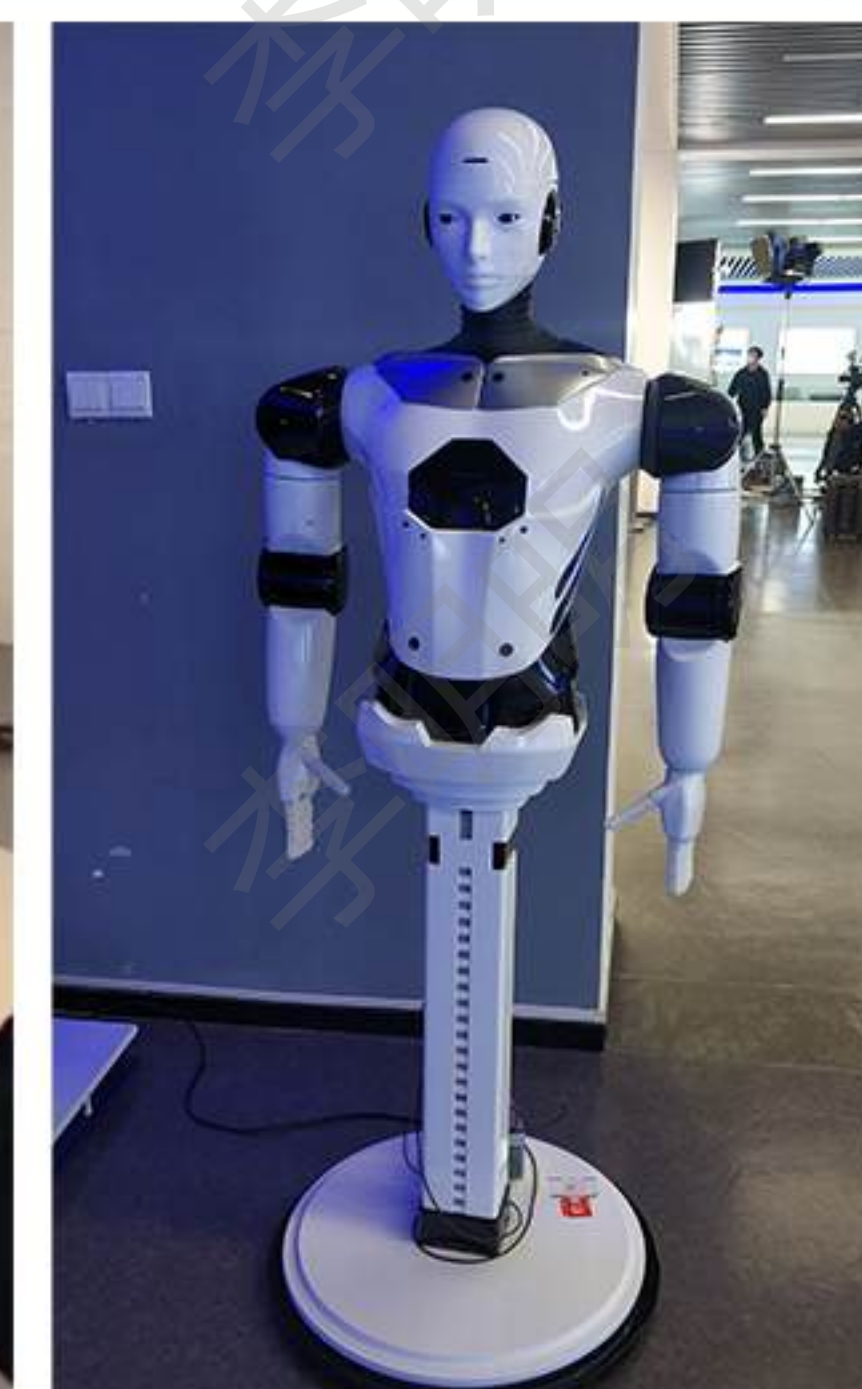

Concept Showcase

概念展示

仿生人的外观设计摒弃市面主流的幼态风格，搭配随动机械双手，内置自主研发的全新一代一体化伺服关节。通过与机械手的趣味互动，即可近距离体验工业机械手的灵活操控与精准定位能力。

The humanoid robot's appearance design abandons the mainstream childish style on the market. Equipped with motion-following mechanical hands and built-in self-developed new integrated servo joints, users can closely experience the flexible manipulation and precise positioning capabilities of industrial mechanical hands through interesting interactions with the robot's hands.

03

Concept Showcase

动效设计

汽车灯光秀功能，将转向灯、远近光灯等全车灯光系统与歌曲节奏深度联动，灯光伴随音乐节拍同步变换，打造沉浸式声光互动体验

The car light show function deeply synchronizes the vehicle's entire lighting system—including turn signals, high and low beams—with music rhythms, and the lights change in tandem with the beats to create an immersive audio-visual interactive experience.

一体式智慧灯幕，融合显示性能与多元交互能力，既是科技化外观标识，也是人车与车外交互的智能界面。

The integrated smart light curtain combines outstanding display performance with versatile interactive capabilities, serving not only as a high-tech visual signature but also as an intelligent interface for both in-vehicle and external interactions.

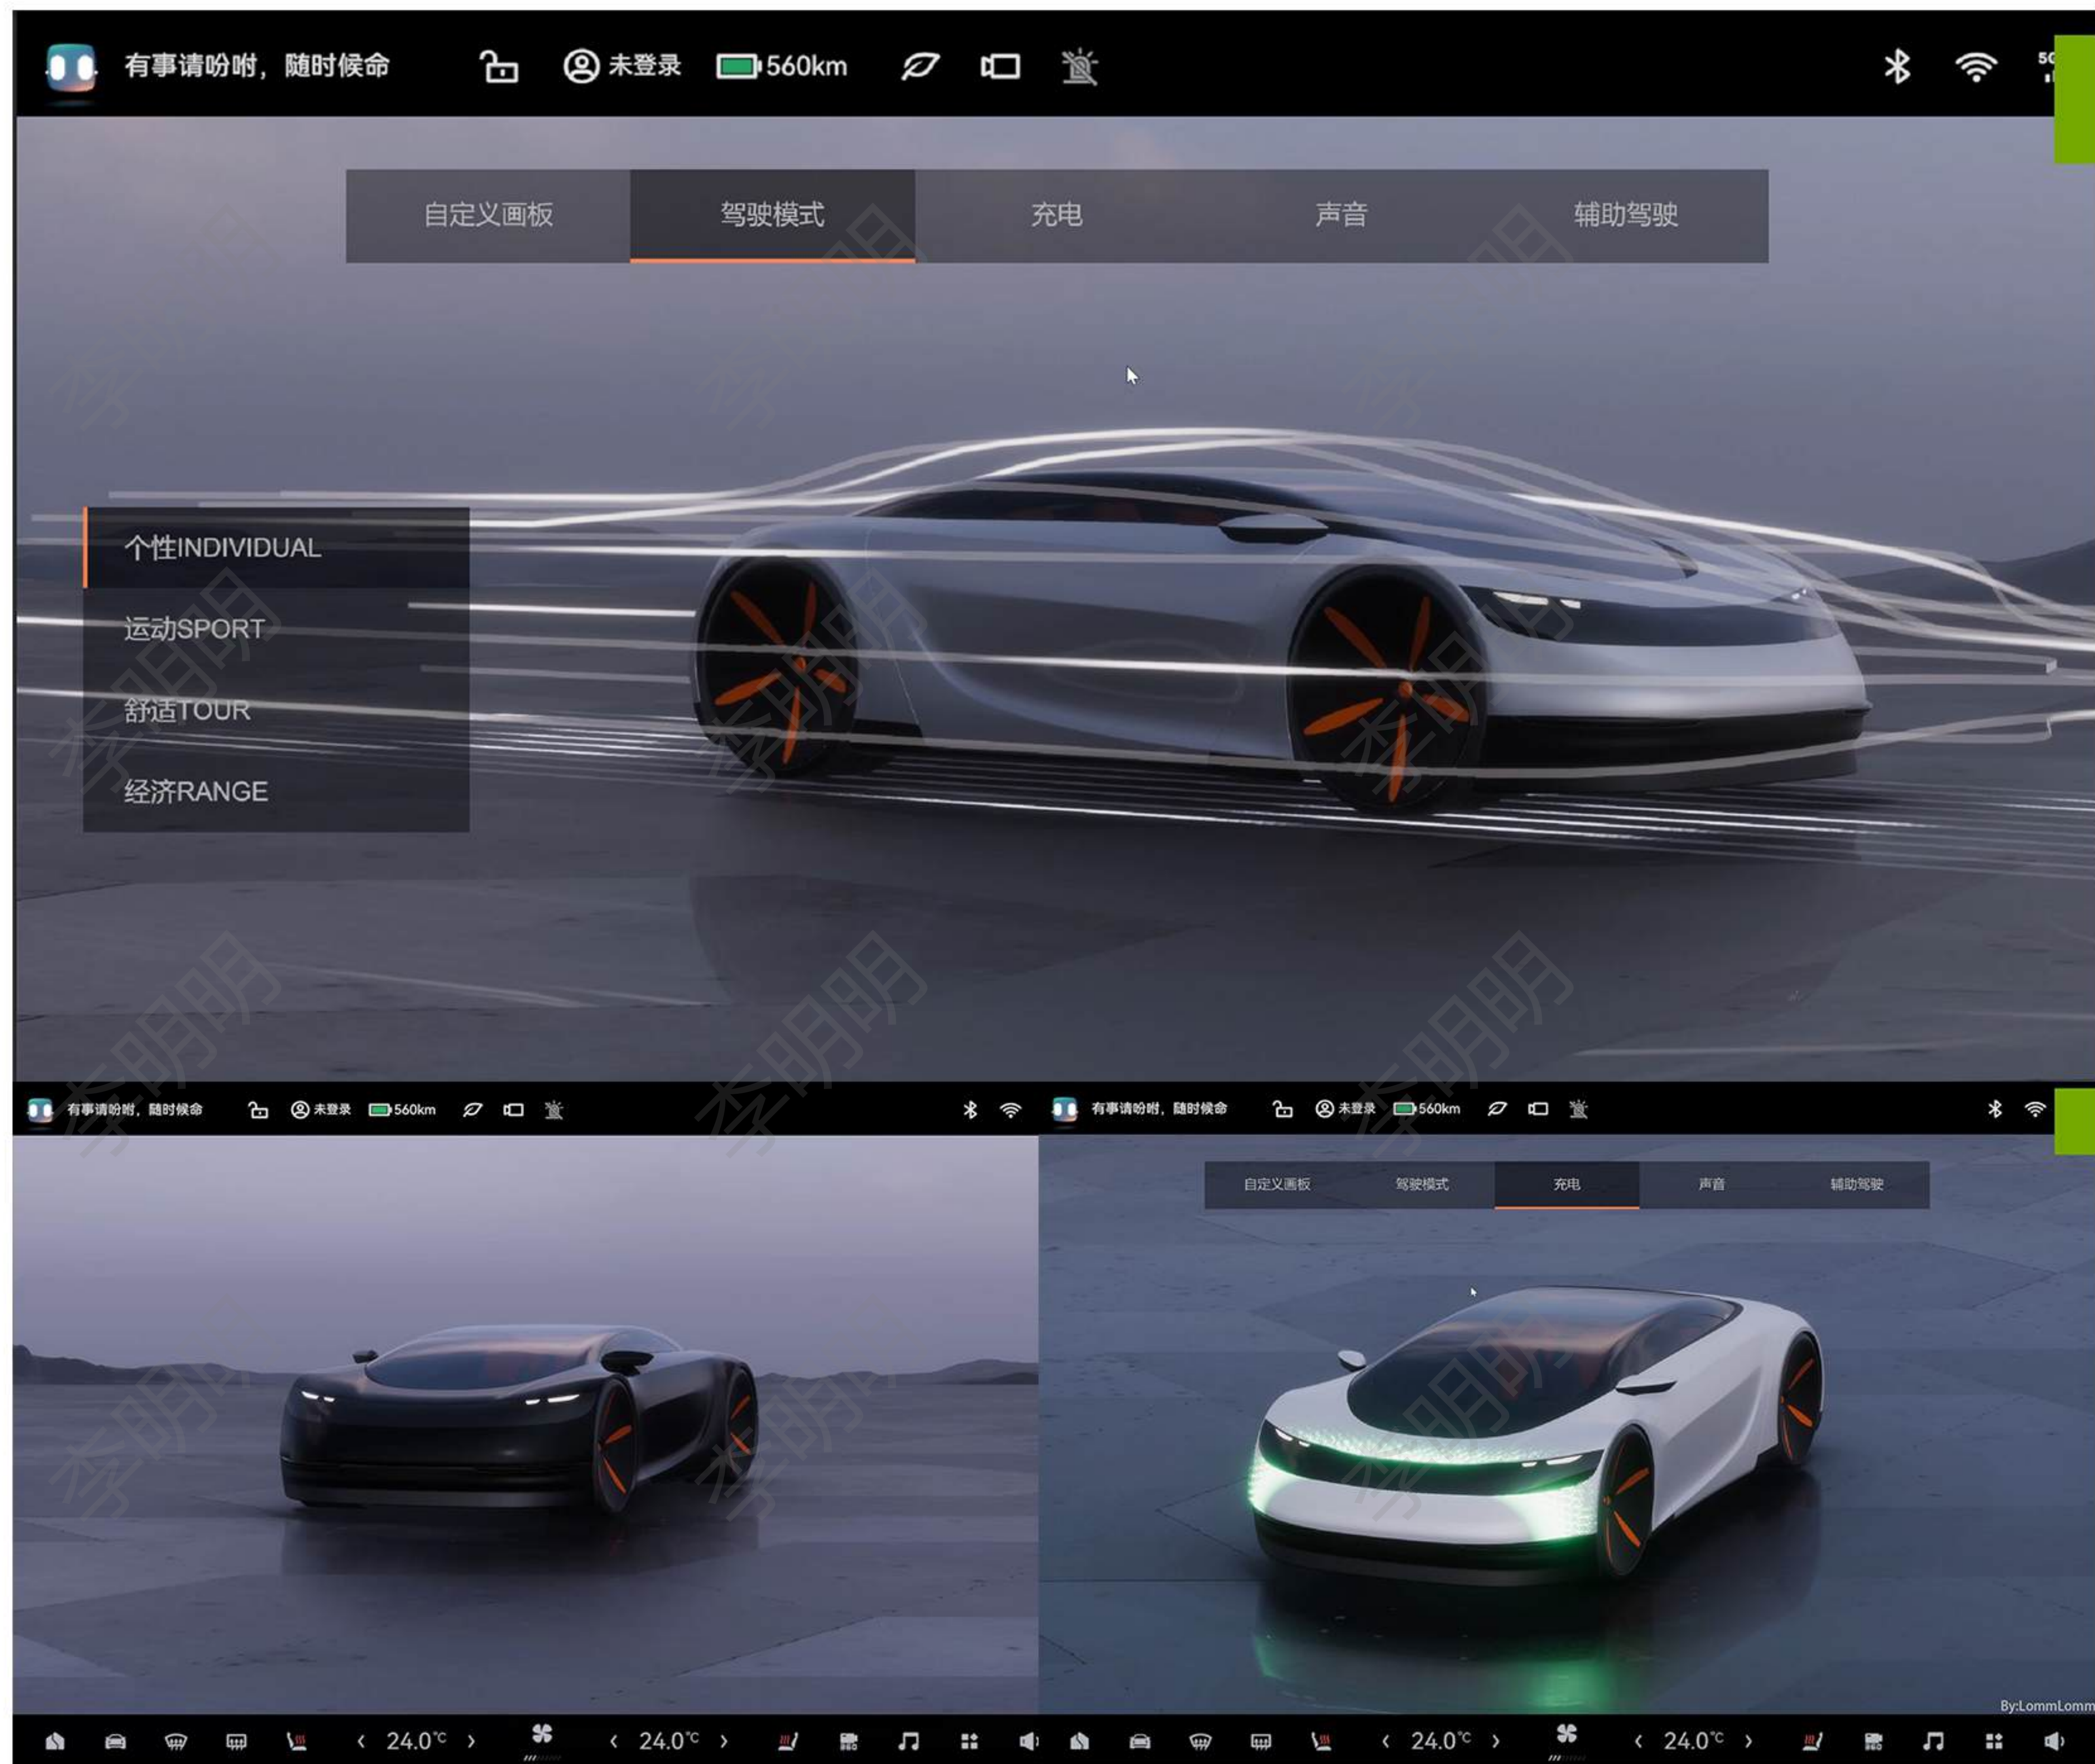

Concept Showcase

动效设计

基于 Unity 引擎的动态视觉效果概念设计，实现驾驶模式切换、充电流程状态及车漆颜色渐变的实时交互呈现，丰富车机系统的视觉交互体验。

Conceptual Design of Dynamic Visual Effects Based on the Unity Engine: Realizing Real-time Interactive Presentation of Driving Mode Switching, Charging Process Status, and Car Paint Color Gradient, and Enriching the Visual Interactive Experience of the Vehicle Infotainment System

04

Concept Showcase

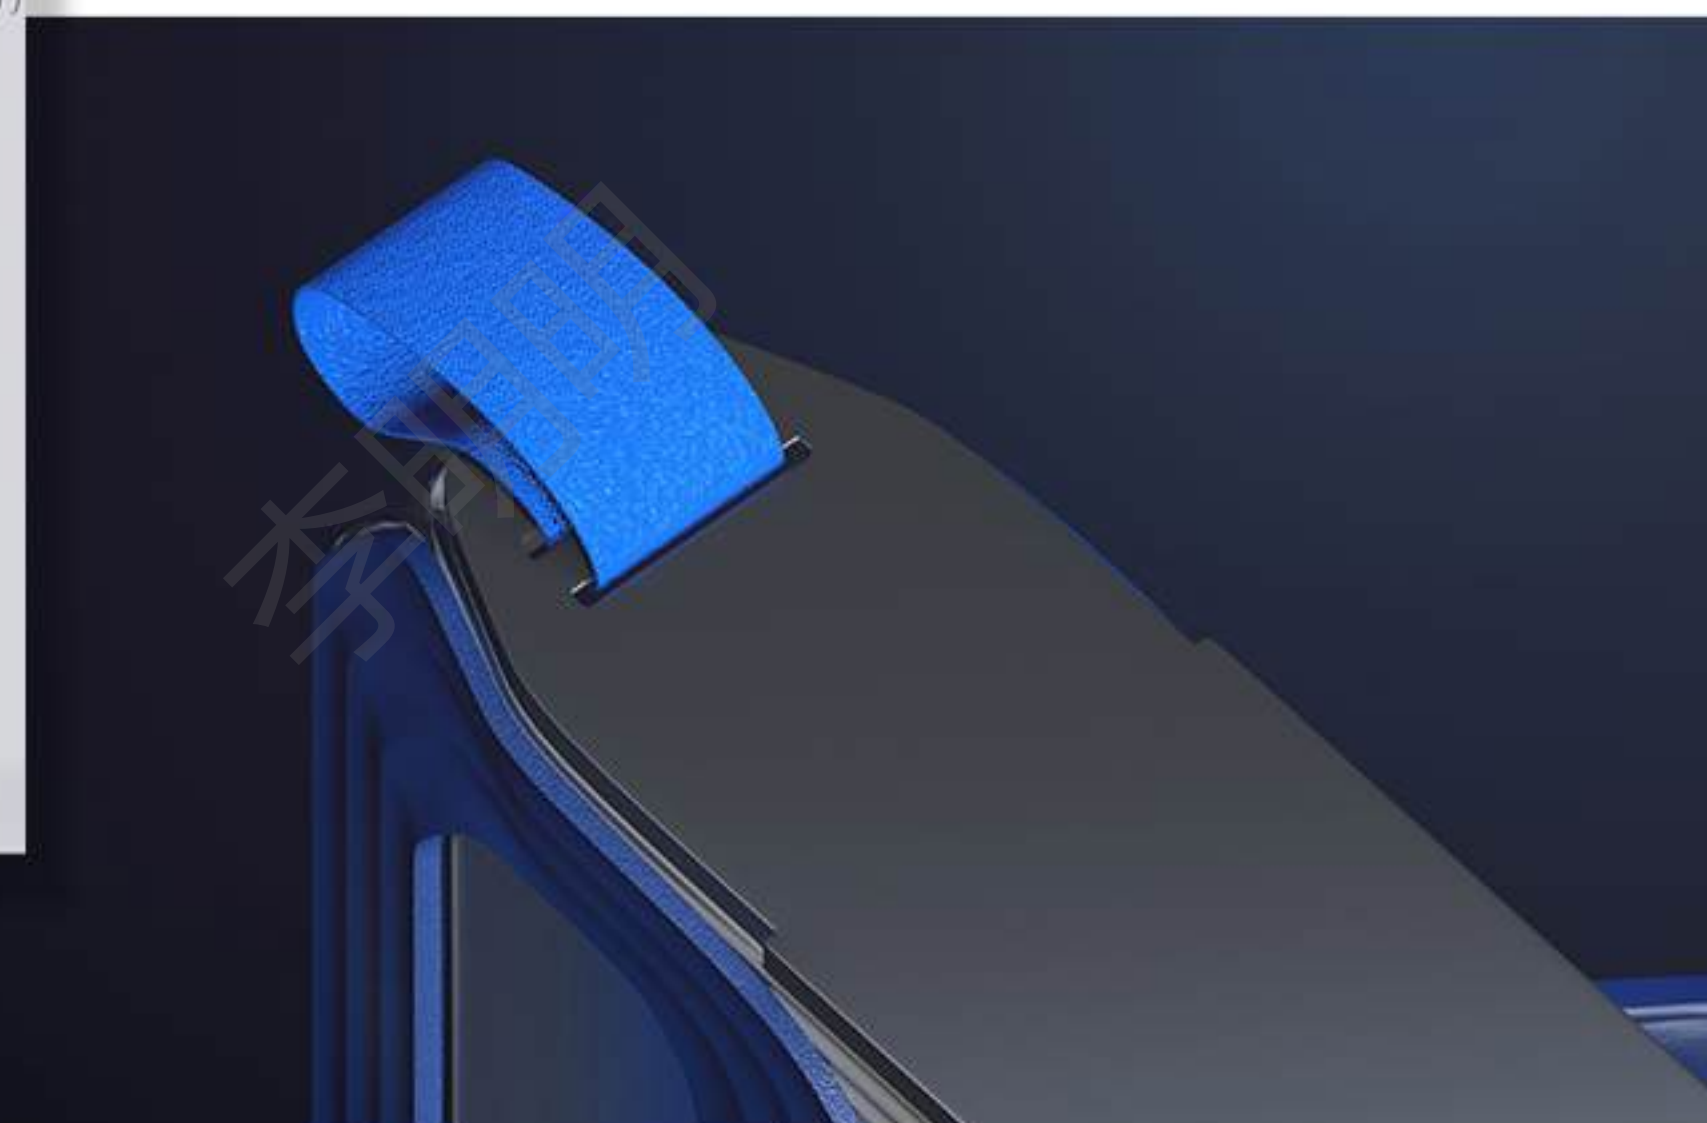

概念展示

车载冰箱专用两用水壶，专为车载冰箱内部空间量身设计，适配居家与车内双重场景。创新将水壶把手与冰箱内部占用空间巧妙融合，既优化了收纳效率，又兼顾了产品美观性，实现空间利用与视觉设计的平衡。

Special dual-purpose water kettle for car refrigerators, tailored to the internal space of car refrigerators and suitable for both home and in-car scenarios. Its innovative design ingeniously integrates the kettle handle with the occupied space inside the refrigerator, which not only optimizes storage efficiency but also takes into account product aesthetics, achieving a balance between space utilization and visual design.

Its innovative design ingeniously integrates the kettle handle with the occupied space inside the refrigerator, which not only optimizes storage efficiency but also takes into account product aesthetics, achieving a balance between space utilization and visual design.

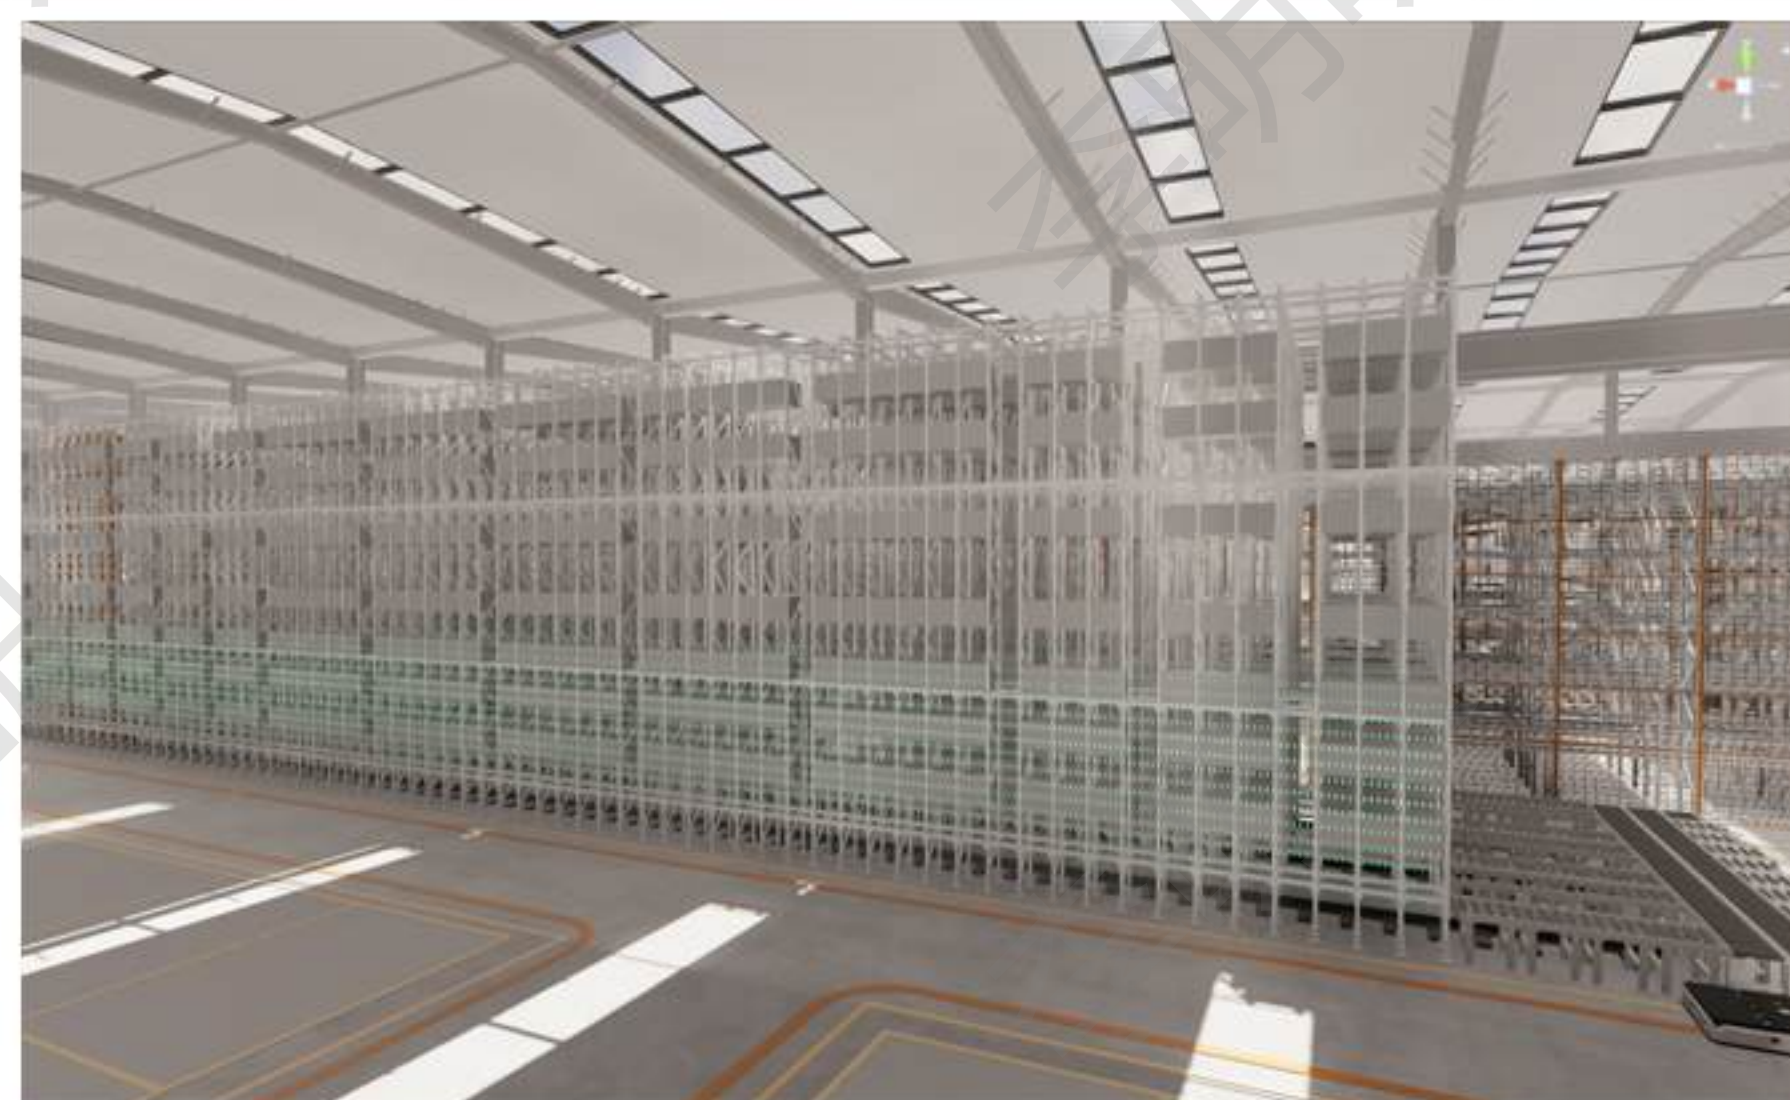

Concept Showcase

概念展示

通过预计算烘焙光照贴图，复用光照数据，有效提升数字孪生实时渲染效率。实时光线追踪可还原实景光影质感，增强数字孪生真实度。

Pre-baked lightmaps and reused lighting data greatly improve real-time rendering efficiency for digital twins. Real-time ray tracing restores authentic light and shadow details, enhancing scene realism.
